

Question on homework problems

(17) $y = -\frac{5}{2}x - 4$

X-int
 $0 = -\frac{5}{2}x - 4$

y-int
 $y = -\frac{5}{2}(0) - 4$
 $y = -4$
 $(0, -4)$

$\frac{2}{5}y = \frac{5}{5}x$

$\frac{-8}{5} = x$

$-1.6 = x$

(15) $3y - 3 = 6x$

X-int
 $3(0) - 3 = 6x$

y-int
 $3y - 3 = 6(0)$

$\frac{-3}{6} = \frac{6x}{6}$

$3y - 3 = 0$

$-\frac{1}{2} = x$

$3y = 3$

$(-\frac{1}{2}, 0)$

$y = 1$
 $(0, 1)$
